All messages are expressed in some language and usually, there is a protocol set of rules for any situation where such messages are exchanged. Various races of human being have developed a number of languages for communicating over thousands of years such as Sanskrit, Chinese, English, Tamil, French, in fact, few thousands of them.

These are called as natural languages. This need is fulfilled by compilers. The compilation process is a sequence of various phases. This lab course provides the students handson experience with crafting a simple compiler, working on a sizeable software engineering project, using modern software tools, and most importantly correlating theory with practice. Identifiers, constants, operators, comments etc. It is important for a computer scientist to understand the process by which programs written in highlevel languages are translated and executed. Among other things, this will help you write better programs, and enable you to make more effective use of available compiler technology.
